

ABSTRACT OF THE DISCLOSURE

The present invention relates to a portable instrument for editing audio/video clips in real time. The instrument includes a processor for processing audio/video clips by applying a special effect to the clip. The instrument also includes a memory for storing the audio/video clips and special effects. In the instrument, a clip is selected to be reproduced and a special effect may also be selected to be applied to the selected clip. As the special effect is applied to the clip, the resultant clip is outputted in real time.
